Response to QSK50 Engine Issue

Dear Colleagues,

We have double checked with Cummins China about Cummins QSK50 C2150 engine, the resource of this model should be Chongqing Cummins.

Chongqing Cummins is the production base for Cummins' high-power engines in China, which is jointly established by Cummins and Chongqing Machinery & Electric Co., Ltd.

The QSK50 C2150 engines produced here are currently products of the joint venture company and not fully owned by Cummins. Although the parts used in the production of the engines are manufactured according to Cummins standards, many of the parts suppliers have not passed Cummins' PPAP (Production Parts Approval Process), that is, the suppliers have not passed Cummins' supply verification. Currently, Cummins has not approved the QSK50 C2150 engines produced by Chongqing Cummins for use in the mining application market. Their application is limited to the oilfield fracturing, drilling units, etc. where the annual operating time is relatively short (annual operation less than 1,000 hours). However, the mining applications such as excavators and mining trucks have an annual operating time of generally over 5,000 hours. Currently, it is not recommended to use the QSK50 C2150 engines produced by Chongqing Cummins in mining applications.

Best Regards !
